FEW POLYNOMIAL IDENTITIES INVOLVING PASCAL'S TRIANGLE ROWS

PETRO KOLOSOV

ABSTRACT. In this short report famous the binomial identity

$$\sum_{k=0}^{n} \binom{n}{k} = 2^n$$

is generalized such that relation between Pascal's triangle and volume of m-dimension n-length hypercubes is shown. Where $\binom{n}{k}$ are binomial coefficients and $(m,\ n)$ are positive integers.

1. Introduction

We start from the famous relation about row sums of the Pascal triangle, that is

$$\sum_{k=0}^{n} \binom{n}{k} = 2^n, \tag{1.1}$$

where $\binom{n}{k} = \frac{n!}{k!(n-k)!}$ are binomial coefficients [GKPL89]. Identity (1.1) is straightforward because the Pascal's triangle is

Key words and phrases. Binomial coefficients, Binomial theorem, Pascal's triangle, Binomial sums, Binomial distribution, Binomial identities.

n/k	0	1	2	3	4	5	6	7	8
0	1								
		1							
2	1	2	1						
2 3	1	3	1 3	1					
4	1	4	6	4	1				
5	1	5	10	10	5	1			
6	1	6	15	20	15	6	1		
7	1	7	21	35	35	21 56	7	1	
8	1	8	28	56	70	56	21	8	1

Table 1. Pascal's triangle [CG96]. Each k—th term of n—th row is $\binom{n}{k} \cdot 1^k$. Sequence A007318 in OEIS [Slo64].

Consider a generating function such as $f_2(n,k) = \binom{n}{k} \cdot 2^k$. The function $f_2(n,k)$ generates the following Pascal-like triangle

n/k	0	1	2	3	4	5	6	7	8
0	1								
1	1	2							
2	1	4	4						
2 3 4	1	6	12	8					
	1	8	24	32	16				
5	1	10	40	80	80	32			
6	1	12	60	160	240	192	64		
7	1	14	84	280	560	672	448	128	
8	1	16	112	448	1120	1792	1792	1024	256

Table 2. Triangle generated by the function $\binom{n}{k} \cdot 2^k$. Can be reproduced using Mathematica function GeneratePascalLikeTriangle[2, 8] at [Kol22]. Sequence A013609 in OEIS [Slo64].

Now we can notice that

$$\sum_{k=0}^{n} \binom{n}{k} \cdot 2^k = 3^n \tag{1.2}$$

Continue similarly we can generalize the equations (1.1), (1.2) as follows

$$2^{n} = \sum_{k=0}^{n} \binom{n}{k} \cdot 1^{k}$$
$$3^{n} = \sum_{k=0}^{n} \binom{n}{k} \cdot 2^{k}$$
$$4^{n} = \sum_{k=0}^{n} \binom{n}{k} \cdot 3^{k}$$

. . .

$$m^n = \sum_{k=0}^n \binom{n}{k} \cdot (m-1)^k$$

Therefore, let be a theorem

Theorem 1.1. The following identity involving polynomial m^n holds

$$m^{n} = \sum_{k=0}^{n} \sum_{j=0}^{k} \binom{n}{k} \binom{k}{j} (-1)^{k-j} m^{j}$$
(1.3)

where (m, n) are positive integers.

Proof. Recall the induction over m, let be a base case m=2, hereby

$$2^{n} = \sum_{k=0}^{n} \binom{n}{k} (2-1)^{k} \tag{1.4}$$

Reviewing an equation (1.4) we can see that

$$(\underbrace{2+1}_{m=3})^n = \sum_{k=0}^n \binom{n}{k} \cdot (\underbrace{(2-1)+1}_{m-1})^k \tag{1.5}$$

Continue similarly it is straightforward that $m^n = \sum_{k=0}^n \binom{n}{k} \cdot (m-1)^k$. However, we are able to expand the part $(m-1)^k$ by means of Binomial theorem [AS72], that is

$$(m-1)^k = \sum_{j=0}^k {k \choose j} (-1)^{k-j} m^j$$

So that now we are able to merge both results $m^n = \sum_{k=0}^n {n \choose k} \cdot (m-1)^k$ and $(m-1)^k = \sum_{j=0}^k {k \choose j} (-1)^{k-j} m^j$ to receive

$$m^{n} = \sum_{k=0}^{n} \binom{n}{k} \cdot \underbrace{(m-1)^{k}}_{\sum_{j=0}^{k} \binom{k}{j} (-1)^{k-j} m^{j}} = \sum_{k=0}^{n} \binom{n}{k} \sum_{j=0}^{k} \binom{k}{j} (-1)^{k-j} m^{j}$$

$$= \sum_{k=0}^{n} \sum_{j=0}^{k} \binom{n}{k} \binom{k}{j} (-1)^{k-j} m^{j}$$

Theorem (1.3) may be verified using Mathematica command PolynomialIdentity[m, n] at [Kol22]. This completes the proof.

Moreover, by means of the binomial identity [Gro16], Chapter 4]

$$\binom{n}{k}\binom{k}{j} = \binom{n}{j}\binom{n-j}{k-j}$$

The polynomial m^n is identical to

$$m^n = \sum_{k=0}^n \sum_{j=0}^k \binom{n}{j} \binom{n-j}{k-j} (-1)^{k-j} m^j$$
